

Daily Maintenance

Powder-coated Aluminum tubes:

Known as architectural aluminum, 6063 Aluminum is the choice for extrusion with its excellent extrudability and high corrosion resistance, and ability to be formed into complex shapes. By powder-coating, the finish is scratch and UV-resistant, highly resistant to corrosion.

Remove any grease or deposits with the organic solvent. Swab down with a mild diluted detergent followed by rinsing with cold clean water. Dry off with a soft cloth. If necessary, use a soft brush to remove the dirt from the pores. Do not use any abrasive cleansers to damage the coating.

Polyester Fabric:

Polyester has excellent wrinkle resistance and stability, not easy to deformation and has good elasticity, waterproof and stain-proof UV protection, mostly used for outdoor sofa cushions, durable and long-lasting, and easy to clean.

As the fabric has good water and stain resistance, timely removal of surface dirt and splashes can effectively prevent contaminants from penetrating the fabric and stubborn stains.

First, remove stains with an absorbent cloth or soft brush. Spray the mixture (water 10:detergent 1.5) on the stain and wait for 5-10 minutes. Scrub back and forth with a soft brush while using an absorbent cloth to promptly remove the effluent. Then spray clean water on the soapy area. Scrub gently with a clean, soft-bristled brush while absorbing the suds with an absorbent cloth. Repeat this process until no suds are spilled and finally air dry.

Texilene/Teslin

Texilene also named Teslin, which is a mesh material woven with polyester fiber covered by a coating of PVC. Lightweight, resilient and durable, this eco-friendly range was developed on the basis of environmental criteria from the very beginning. Teslin cloth is a special textile produced by shuttleless machine, using the compound yarn with special wrapping structure, i.e. PVC/PET skin core type yarn, which has the advantages of bright color without fading, high tensile strength, water and oil resistance and UV resistance, aging resistance, abrasion resistance, decay resistance, chemical resistance, non-toxic, smooth and cool surface, excellent breathability and long service life.

Clean with water and pH-neutral detergent mixture. Use a soft brush and brush the surface repeatedly in a circular motion. Leave it for a while before rinsing. Wipe with a dry cloth.

PE Rattan:

PE rattan is mainly made of polyethylene and some powder through some special process, where the proportion of polyethylene is slightly larger. It is a superior quality, polyethylene-based fiber characterized by high flexibility and tensile strength, also with the advantages of high strength, flexibility, durable, waterproof, sunscreen, mold, moth, hygiene, easy to clean.

You can use a brush, rag or vacuum cleaner to clean rattan furniture, or a mild natural detergent with warm water and a soft non-abrasive brush. Rinse with a gentle spray of clean water, then dry it with a clean cloth. Should prevent collisions and knife-tipped hard objects scratch, and can be moisture-proof, anti-aging, insect-resistant, infrared-resistant.

Plastic wood:

Plastic wood materials also called wood-plastic composites are mainly made of plastic (polypropylene (PP), polyethylene (PE), polyvinyl chloride (PVC) and other recycled waste plastics) as raw materials, mixed into new wood materials by adding wood flour, rice husk, straw, and other waste plant fibers, and then produced by extrusion, molding, injection molding, and other plastic processing processes to produce panels or profiles.

With the advantages of being waterproof and moisture-proof, insect and termite-proof, strong plasticity, high environmental protection, no pollution, and recyclable. Good fireproof performance can effectively flame retardant, Good processability, no cracking, no expansion, no deformation, no need for repair and maintenance, long service life, easy to clean, save the cost of repair and maintenance.

Apply mild and non-abrasive detergent to a damp cloth and wipe it gently. The grooved part can be cleaned with a soft nylon brush. Do not cut objects or place high-temperature objects directly on the table. a clean soft cloth wipe the surface regularly, and do not expose plastic wood tables and chairs to an environment full of acidic and alkaline chemicals, or immerse them in grease.

Furniture Cover:

These covers are made from waterproof and UV-resistant solution-dyed polyester fabric, which can protect furniture from light rain, dust, and mildew forming, to prolong the lifetime of the furniture.

Make sure the furniture is dry before covering it. After heaven rains or snow, checking the furniture cover is necessary, remove the snow or water on the cover to keep it in good condition.
